

Prof. Kheng Lim Goh

Newcastle Research & Innovation Institute (NewRIIS) Singapore
Newcastle University in Singapore (NUIS)

Kheng Lim Goh is a Chartered Engineer and Chartered Physicist with the Institute of Mechanical Engineers (UK) and Institute of Physics (UK). His research interest is in the repair of fibre reinforced composites used in aerospace and automotive engineering. He holds the position of Associate Professor at Newcastle Research and Innovation Institute (NewRIIS) and the Newcastle University in Singapore, and is affiliated to the Faculty of Science, Agriculture & Engineering, Newcastle University (UK). He leads the Advanced Composite Research Group at NewRIIS. Professor Goh has authored and co-authored over 70 papers in peer-reviewed journals, books and conferences that cover a wide range of composite materials, together with international collaborators from Argentina, Canada, India, Malaysia, Singapore, Sri Lanka and UK. His research theme underlies an understanding of the physical properties of natural and synthetic materials and implications for designing composites for engineering applications and for repairing damaged composites. He is the author of a book on 'Discontinuous-fibre reinforced composites: fundamentals of stress transfer and fracture mechanics' published by Springer.
